SPEAKER SCRIPT · FIVE-MINUTE VERSION

CompassFinance

A word-for-word script for the five-minute pitch, one page per slide, with timings, what to show, and what not to say. The deck itself is unchanged; this script uses ten of its fourteen slides and keeps the other four as backup for questions.

RUNNING ORDER

CLOCK	SLIDE IN DECK	WHAT YOU SAY IN ONE LINE
0:00	1 · Cover	Who you are, what this is. Click within ten seconds.
0:10	2 · Hook	€100 in 2015 → about €460 today. The market rewards those who start.
0:40	4 · Problem	Young adults want to invest; apps assume they already know how.
1:10	7 · Value	From “I don’t know where to start” to a first real investment.
1:35	8 · AI engine	Compass is a patient tutor, not a black box.
2:05	9 · Product	Five screens, live today. Scan and try it.
2:50	3 · Founder	Research on teams of AI models, plus a million bank conversations a day.
3:20	10 · Growth	Free learning brings people in; sharing, campuses and banks spread it.
3:50	13 · Returns + ask	Three steps to a return, then the amount you are raising.
4:30	14 · Closer	Join us. QR code, email. Stop at 4:50.

Skipped during the talk, kept for questions: 5 Validation, 6 Pillars, 11 Competitors, 12 Market. Their one-line answers are on the last page. In the deck you can jump to them by slide number.

Pace: about 130 words a minute. The whole script is roughly 640 spoken words, which leaves room for two pauses and one laugh.

1

SLIDE 1 · COVER

0:00 – 0:10

CompassFinance

Good morning. I’m Alex Koviazin, and this is CompassFinance: your guide in finance, and an AI tutor for investing.

DO

- Smile, look at the room, click before the sentence is cold.
- Say your name slowly; people will search for it later.

DON’T

- Don’t thank the organisers at length. Ten seconds, then the hook.
- Don’t explain the deck structure.

2

SLIDE 2 · HOOK

0:10 – 0:40

A question to start

Let me start with a question. If you had put one hundred euros into the S&P 500 at the start of 2015, what would you have today? · PAUSE TWO SECONDS ·

About four hundred and sixty. The market rewards people who start. The problem is that most young adults never start at all.

DO

- Actually pause. Let someone guess. If they shout a number, react to it.
- Point at the €460 when you say it.

IF ASKED

- Total return with dividends reinvested, January 2015 to October 2026, about 14% a year. Calculated in dollars; the euro result is close.
- Past results do not guarantee future results, and you know it: say so if challenged, with a smile.

3

SLIDE 4 · THE PROBLEM

0:40 – 1:10

Young adults want to invest. Almost none know how to start.

Young adults want to invest. Almost none know how to start. They are curious, but they are locked out: by jargon, by the fear of losing money, and by apps built for people who already know what they are doing.

We meet three kinds of them. The beginner who is scared to risk a single euro. The saver who already puts money aside but doesn't trust generic robo-advice. And the one who wants their first investment to reflect their values, not just a ticker symbol.

DO

- Name the three types with a small gesture to each card, left to right.
- If there are young people in the room, look at them on "scared to risk a single euro".

DON'T

- Don't read the card text. The headings are enough.
- Don't say "the most underserved generation"; the slide says "a financially underserved generation" on purpose.

4

SLIDE 7 · VALUE PROPOSITION

1:10 – 1:35

From “I don’t know where to start” to a first real investment

CompassFinance turns “I don’t know where to start” into a first real investment, safely, and on your own terms.

Zero euros at risk while you learn. Thirteen real assets to learn and trade, from indices to crypto. And a one-to-one AI tutor that adapts to you.

DO

- Three numbers, three beats. Say “zero”, “thirteen”, “one to one” with a tiny pause between each.
- This is the sentence to repeat at the end, so say it clearly here.

SKIPPED SLIDE

- Slide 6 (Three pillars: Education, Exploration, Activation) says the same thing in other words. Skip it in the talk; if asked “how does it work”, that is the slide to jump to.

5

SLIDE 8 · WHAT IS BEHIND COMPASS

1:35 – 2:05

A patient tutor, not a black box

The tutor is called Compass. It is an AI that holds a normal conversation and explains investing in plain words. Three things make it different.

It teaches from real market data and a fixed curriculum; it doesn't make things up. A second AI step checks every answer before you see it, and that idea comes from my own research. And it tracks what you have already understood, and adjusts the pace.

DO

- Say "plain words" plainly. No model names, no "LLM", no "multi-agent". If an investor asks, then you can go technical.

CHECK BEFORE YOU SAY IT

- Is the second checking step built in the live app today? If it is planned rather than built, say "will check" instead of "checks". An investor who tries the app will notice.

6

SLIDE 9 · PRODUCT

2:05 – 2:50

Five screens, one journey

And it is live today. Five screens, one journey.

Home: your portfolio and today’s insight, in one sentence. Explore: bite-sized lessons, and the next asset you unlock by finishing them. News: only what matters for what you hold. Portfolio: a practice portfolio with real prices, and your real brokerage accounts sitting next to it. And Profile: your investor type, your level, your progress.

There is a code on the screen. Scan it now; it works on your phone while I keep talking.

DO

- Walk the screens left to right with your hand. One short sentence each, no more.
- Invite the scan and then move on; don’t wait for phones.

BEFORE THE DAY

- Scan the QR from the real screen yourself. Open compassfinance.online on the venue Wi-Fi.
- The Portfolio screenshot shows a Trading 212 account number. Replace it if you don’t want it on a big screen.

7

SLIDE 3 · MEET THE FOUNDER

2:50 – 3:20

The AI behind Compass comes from our own research

Why me? I'm a PhD candidate at the University of Luxembourg, at SnT, working on AI for finance: how several AI models can work together to make better financial decisions. That is exactly the idea behind Compass. One of my papers is submitted to AISTATS 2027.

And before academia, I led the phone-menu and chatbot support team at the most popular bank in Russia. A million customer contacts a day. So I know what people actually ask a bank, and what they don't understand.

DO

- Thirty seconds, not a biography. The last sentence is the point: you have seen real customers at scale.
- Say "a million a day" and let it land.

IF ASKED

- Which bank, which years, how big the team was. Have the answers ready; they are not on the slide.
- The second paper (reproducibility of multi-agent AI) has no status on the slide. Say "in preparation" or whatever is true.

8

SLIDE 10 · HOW WE GROW

3:20 – 3:50

Learning is the hook. Sharing is the engine.

How do we grow? Learning is the hook, sharing is the engine.

Free learning removes the biggest barrier to signing up, so acquiring a user stays cheap. Every achievement and every referral link is built to be shared with friends. Student organisations and universities in Luxembourg and the Benelux give us a trusted first audience. And we offer the same education layer to retail banks, as an onboarding tool for their younger customers.

DO

- Four beats, four cards. Keep the rhythm; this slide should feel fast.

IF ASKED

- “Which campuses or banks have you signed?” Answer honestly: if none yet, say who you are talking to and when you expect the first pilot. Don’t let the slide imply more than you have.

9

SLIDE 13 · RETURN FOR INVESTORS

3:50 – 4:30

How investors get their money back

So how do investors get their money back? Three steps.

One: we sign the first bank pilots and grow a base of active learners here in Luxembourg. Two: revenue. Compass+ subscriptions, referral fees when a learner opens a real account, and fees from partner banks. Three: the exit. A bank, broker or fintech that wants our users buys the company, or you sell your shares in a later round.

To get there, we are raising [amount] to [what it funds: e.g. first bank pilot, two engineers, twelve months of runway].

DO

- This is the slide people remember. Slow down. Look at the investors, not the screen.
- Say the amount as a plain number in euros. Then stop; don't apologise for it.

FILL IN FIRST

- The ask is not on the slide. Decide the amount and the use of funds, and either add one line to slide 13 or say it from memory.
- Have the Compass+ price ready: "how much does it cost?" comes right after this slide.

10

SLIDE 14 · CLOSER

4:30 – 4:50

Join us.

We want to be the compass in a generation's financial decisions. Help us build the path from "I don't know how" to "I just made my first investment".

Scan the code, try the app, and write to me at team@compassfinance.online. Thank you.

DO

- "Thank you", then silence. Don't add "any questions?"; the host will.
- Stay on this slide during questions: the QR and the email are on it.

TIMING

- If you reach this slide at 4:20 you are on pace. If you are at 5:00, cut the first sentence and go straight to "scan the code".

BACKUP · FOUR SLIDES YOU SKIP, AND WHAT TO SAY IF ASKED

Slide 5 · Early validation

“Our first seven interviews, with young investors aged 27 to 34, all pointed the same way: they want things explained in plain words, trust decides whether they use an app, and they would open it daily.” Then, before anyone asks: “Yes, those were slightly older than our 18–27 target. That was who we could reach first; we are now interviewing students.”

Slide 6 · Three pillars

“Education, Exploration, Activation. Learn an asset, look at the real market with context, practise with real prices and no money at risk, then make the first real investment.”

Slide 11 · Competitors

“eToro, Trade Republic and Revolut are built for people who already trade; teaching is a side feature. Alinea does values-based investing for US beginners. Composer made automated strategies easy and is now part of SoFi, but its users are already financially literate. We own the step before all of them: turning a complete beginner into an investor.”

Slide 12 · Market size

“About 85 thousand people aged 18 to 27 in Luxembourg, our starting point. About 49 million in the EU. About 1.3 billion worldwide. Eurostat and UN figures, estimated from five-year age groups.” If pushed on revenue: say how many of the 85K you expect to convert and at what price, or say that this is what the pilot will tell you.

THE FOUR QUESTIONS TO PREPARE FOR

Why interview 27–34 year-olds when the target is 18–27?
See slide 5 above. Say it before they do.

Which banks or campuses are signed?
Names if you have them; otherwise who you are in talks with and the date of the first pilot.

Is the AI checking step live?
Yes or “it ships in [month]”. Never “sort of”.

What does Compass+ cost, and how many users do you have today?
One number each. If the user count is small, say it with the launch date next to it.
